

# Next.js 심화 11

1 웹 서비스 배포

# Vercel Docs

(<https://vercel.com/docs>)

## Configure a Build

(<https://vercel.com/docs/concepts/deployments/configure-a-build>)

git clone --depth=10 (최근 10개 commit history만 pull)

## Analytics

(<https://vercel.com/docs/concepts/analytics>)

vercel 탭에서 enable 가능

## Dashboard Settings

Project Name / Build & Development Settings

Root Directory / Node.js Version

Domains

## Integrations

DebugBear 를 추가해보자

Monitor site speed and Lighthouse scores

클릭만으로 가능한 구조

## Git

Connected Git Repository / Production Branch / Deploy hooks

Serverless Function Region

주로 접근하는 Region 으로 두면 상대적으로 더 빠를 것

## Environment Variables

(<https://vercel.com/docs/concepts/projects/environment-variables>)

## Security

(<https://vercel.com/docs/concepts/projects/overview#logs-and-source-protection>)

## Advanced

### Directory Listing

(<https://vercel.com/docs/concepts/edge-network/directory-listing>)

## 정리

### 웹 서비스 배포

Vercel Docs

홈페이지 대부분 제품 설명 / Docs 존재

Analytics

Web vital 등 분석

Integrations

DebugBear 적용(클릭만으로)

기타

환경변수 / 도메인 / 보안 등...
